

Article 1-3 (Destructive Testing)

With regard to technical standards which bear a close relationship with impacts caused by collisions, etc. provided for in this Ordinance, evaluation shall be conducted to determine conformity by means of destructive testing of a device having the identical construction with the device concerned to which the said technical standard is applied. However, this provision shall not apply to cases where the Minister of Land, Infrastructure and Transport deems it extremely difficult to conduct the destructive testing in connection with the technical standards provided for in Paragraph 2 of Article 11, Paragraph 2 of Article 15, Paragraph 3 of Article 17, and Paragraphs 2 through 4 of Article 18, because of nonavailability or extreme scarcity of the device having the identical construction.
