AutoSAP joins OICA as Czech automotive industry strengthens its voice in global mobility

Paris, November 18, 2026 - The International Organization of Motor Vehicle Manufacturers (OICA) is pleased to welcome the Czech Automotive Industry Association (AutoSAP) as its newest member.

Founded in 1989, AutoSAP supports the competitiveness, innovation and long-term development of one of Europe's most important automotive manufacturing centres, representing 130 organisations across the Czech automotive ecosystem, including vehicle manufacturers, suppliers, universities and research centres.

The Czech Republic has developed a strong automotive tradition built on a highly skilled workforce, technical expertise and a diverse industrial base. The country produces around 1.5 million vehicles a year and is home to manufacturers such as Škoda Auto, Toyota, Hyundai, Tatra Trucks and Iveco Bus. The Czech automotive industry is one of the pillars of the national economy, accounting for 10% of the country's GDP and more than one-fifth of its exports. It directly employs 180,000 people and supports around half a million jobs in total, including those in related industries.

AutoSAP joins OICA at a pivotal moment for the global automotive industry, as manufacturers invest heavily in electrification, digital technologies and new mobility solutions whilst maintaining industrial competitiveness in an increasingly challenging global environment.

Through its membership of OICA, AutoSAP will contribute the experience and expertise of the Czech automotive industry to international discussions on technical regulations, industrial competitiveness and the future development of the automotive sector.

François Roudier, Secretary General of OICA, said: *"The Czech Republic is one of Europe's leading automotive manufacturing nations, with a long industrial tradition and a strong culture of engineering and innovation. We are delighted to welcome AutoSAP to OICA and look forward to working together on the shared challenges and opportunities facing the global automotive sector."*

Zdeněk Petzl, Executive Director of the Czech Automotive Industry Association, added: *"The Czech Automotive Industry Association plays an active role in shaping the future of the automotive industry in the European Union. We see strengthening international cooperation, including participation in global discussions on technical regulations, as a natural next step. We therefore warmly welcome our membership in OICA, which will allow us to build on our work to date and contribute the experience and expertise of the Czech automotive industry."*

About OICA
The International Organization of Motor Vehicle Manufacturers (OICA) is the worldwide association of automotive industry trade organisations. Founded in 1919, OICA brings together national automotive associations from around the world to promote international cooperation, technical dialogue and a harmonised regulatory environment in support of safe, sustainable and accessible mobility.

About AutoSAP
The Czech Automotive Industry Association (AutoSAP) is the leading representative organisation of the Czech automotive industry. Its members include vehicle manufacturers, suppliers, universities, research centres and other organisations active across the automotive value chain. The Czech automotive industry is one of the pillars of the national economy, accounting for 10% of the country's GDP and more than one-fifth of its exports. It directly employs 180,000 people and supports around half a million jobs in total, including those in related industries. AutoSAP supports competitiveness, innovation, international cooperation and the sustainable development of the automotive industry.
